6. Versions compatibility.....	3

## 1. Release purpose

This release contains compatibility enhancements and bug fixes. SugarAide is an Android-based application assisting Sugar users in communication with their Sugar contacts.

## 2. New functionality

Feature	Description
Compatibility with Android 6 and 7	The application now supports Android 6 and 7

## 3. Fixed issues

Defect	Description	Solution
Contact info overlay not being displayed on incoming call when there are several contacts with the same phone number	The contact info overlay was not displayed in some instances when there was more than one contact with a given phone number stored on the device	

## 4. Known issues

Issue	Workaround
On Xiaomi devices, despite the user selecting "Allow" during installation, the system prevents the application from performing data synchronization with Sugar and from displaying the overlay on top of the standard phone app.	In order for the application to work properly on such a device, after the application is installed it's necessary to go to Settings and make the following changes: 1) Select "Apps", choose Integros SugarAide and set "Autostart" to ON. 2) Go back to the main Settings menu, select "Permissions" -> "Other permissions", then on the "Apps" tab choose Integros SugarAide and activate "Popup windows".
SugarAide does not currently support Meizu devices with Android 6	

## 5. Release content

Files	Description
sugaraide_free_1.1.zip	Installation package for Sugar
SugarAide_release.apk	Application for installing on mobile devices (Android only)

## 6. Versions compatibility

SugarAide version 1.1 is compatible with versions:

- Sugar Professional, Enterprise, Ultimate 7.6.x.x – 7.10.x.x
- Android version 4.2 and up
